# THREAT ADVISORY

**ATTACK REPORT**

## MetaStealer a \$125 Ticket to Digital Chaos

Date of Publication

December 26, 2023

Admiralty Code

A1

TA Number

TA2023520

# Summary

**First Seen:** March 2022

**Malware:** MetaStealer

**Attack Region:** Worldwide

**Attack:** MetaStealer, a nefarious information-stealing malware, initially surfaced in discreet online marketplaces with a pricing structure of USD 125 per month or USD 1000 for an unlimited subscription, subsequently becoming entangled in malvertising campaigns.

# Attack Details

## #1

MetaStealer, an information-stealing malware, initially surfaced in March 2022 within covert online marketplaces before becoming entangled in malvertising campaigns disseminated through compromised software and pilfered YouTube accounts. The MetaStealer malware is available for purchase at USD 125 per month or USD 1000 for an unlimited subscription.

## #2

The malicious actor behind this threat alleges that it shares identical functionality, codebase, and control panel with the Redline stealer, boasting several enhancements. The initial phase of the attack sequence involves the distribution of MetaStealer through deceptive emails disguised as correspondences related to financial transactions or malvertising campaigns, complete with decoy and landing pages.

## #3

These emails are equipped with an Excel document containing a VBS macro. Once the target accepts the document, the malware is downloaded and executed. Following a system reboot, the file initiates communication with a command-and-control (C2) server, thereby establishing a persistent mechanism.

## #4

MetaStealer is meticulously crafted to stealthily infiltrate target systems, facilitating the potential theft of passwords, cryptocurrency wallets, banking information, identity compromise, and financial losses. The most recent iteration, Meta V4, was unveiled on November 28th, 2023. The emergence of MetaStealer underscores a dynamic threat landscape, with significant implications, particularly within business settings.

# Recommendations

**Enhance Network Security Measures:** Strengthen network security protocols to guard against potential infiltrations by MetaStealer and related threat clusters. Employ robust firewalls and intrusion detection systems, and regularly update security software to mitigate vulnerabilities.

**Anomaly Detection:** Implement anomaly detection algorithms to identify deviations from normal network behavior. This includes monitoring network traffic, system logs, and user activities for any unusual patterns.

**Email Security Enhancements:** Implement advanced measures to filter out malicious emails, especially those carrying attachments with VBS macros, and utilize email authentication protocols to verify the legitimacy of incoming emails.
