THREAT ADVISORY

VULNERABILITY REPORT

Critical Ivanti Zero-day Flaw Exploited in the Wild

Date of Publication	Admiralty Code	TA Number
January 10, 2025	A1	TA2025008

Summary

First Seen: December 2024
Affected Product: Ivanti Connect Secure, Policy Secure, and ZTA Gateways
Threat Actor: UNC5337
Malware: DRYHOOK, PHASEJAM, SPAWNANT, SPAWNMOLE, SPAWNSNAIL, SPAWNSLOTH
Impact: Two critical vulnerabilities, CVE-2025-0282 and CVE-2025-0283, have been identified in Ivanti's Connect Secure VPN appliances, with active exploitation detected since December 2024. CVE-2025-0282 enables unauthenticated remote code execution via a buffer overflow, while CVE-2025-0283 may allow privilege escalation. These vulnerabilities pose significant risks to organizations relying on these systems for secure remote access.

CVEs

CVE	NAME	AFFECTED PRODUCT	ZERO-DAY	CISA KEV	PATCH
CVE-2025-0282	Ivanti Connect Secure, Policy Secure, and ZTA Gateways Stack-Based Buffer Overflow Vulnerability	Ivanti Connect Secure, Policy Secure, and ZTA Gateways	✓	✓	✓
CVE-2025-0283	Ivanti Connect Secure, Policy Secure, and ZTA Gateways Stack-Based Buffer Overflow Vulnerability	Ivanti Connect Secure, Policy Secure, and ZTA Gateways	✗	✗	✓

Vulnerability Details

#1

Ivanti has recently reported active exploitation of two critical vulnerabilities, CVE-2025-0282 and CVE-2025-0283, which affect its Connect Secure (ICS) VPN appliances. These vulnerabilities have been exploited in the wild since December 2024, posing significant risks to organizations that rely on these systems for secure remote access.

#2

CVE-2025-0282 is characterized as an unauthenticated stack-based buffer overflow vulnerability. It allows attackers to execute arbitrary code remotely without requiring any authentication. The exploitation method involves sending specially crafted inputs to the appliance, resulting in a memory overflow that enables the attacker to gain control over the system. This can facilitate various malicious activities, including malware deployment and network compromise.

#3 CVE-2025-0283 appears to be related to privilege escalation or improper input validation, although specific details are less clear. This vulnerability potentially enhances access to systems that have already been compromised. It may be exploited in conjunction with CVE-2025-0282, allowing attackers to execute more complex attacks. Similar to CVE-2025-0282, several versions of Ivanti Connect Secure and Policy Secure are affected.

#4 Researchers have observed that attackers are leveraging CVE-2025-0282 for remote code execution by first conducting reconnaissance to identify vulnerable appliance versions. Once identified, they send crafted payloads that trigger the buffer overflow, modify system settings to facilitate malware installation, and inject web shells into legitimate components for persistent access.

#5 Notably, these attacks have been linked to various malware families, including DRYHOOK, PHASEJAM and SPAWN ecosystem (which includes the SPAWNANT installer, SPAWNMOLE tunneler and the SPAWNSNAIL SSH backdoor and SPAWNSLOTH log tampering utility), indicating a coordinated effort by multiple threat actors, notably the China-nexus group UNC5337.

#6 Users are recommended to upgrade affected products to the latest versions and utilize the Integrity Checker Tool (ICT) to detect any suspicious activities on the systems. If a compromise is suspected, organizations should perform a factory reset and reinstall the appliance using version 22.7R2.5 or later.

Vulnerabilities

CVE ID	AFFECTED PRODUCTS	AFFECTED CPE	CWE ID
CVE-2025-0282	Ivanti Connect Secure: 22.7R2 through 22.7R2.4 Ivanti Policy Secure: 22.7R1 through 22.7R1.2 Ivanti Neurons for ZTA gateways: 22.7R2 through 22.7R2.3	cpe:2.3:a:ivanti:connect_secure:*:*:*:*:*:*:*:* cpe:2.3:a:ivanti:policy_secure:*:*:*:*:*:*:*:* cpe:2.3:a:ivanti:neurons_for_zta_gateways:*:*:*:*:*:*:*:*	CWE-121
CVE-2025-0283	Ivanti Connect Secure: 22.7R2.4 and prior, 9.1R18.9 and prior Ivanti Policy Secure: 22.7R1.2 and prior Ivanti Neurons for ZTA gateways: 22.7R2.3 and prior	cpe:2.3:a:ivanti:connect_secure:*:*:*:*:*:*:*:* cpe:2.3:a:ivanti:policy_secure:*:*:*:*:*:*:*:* cpe:2.3:a:ivanti:neurons_for_zta_gateways:*:*:*:*:*:*:*:*	CWE-121

Recommendations

Apply Security Patches Immediately: Ivanti Connect Secure: Upgrade to version 22.7R2.5 or later. Ivanti Policy Secure and Neurons for ZTA Gateways: Apply patches once released (expected by January 21, 2025). Monitor Ivanti's security advisories for patch updates and apply them promptly.

Conduct Integrity Checks: Use Ivanti's Integrity Checker Tool (ICT) to detect unauthorized modifications or exploitation. Run the ICT regularly, especially after patching, to verify the integrity of the system.

Review and Harden Access Controls: Limit administrative access to Ivanti devices using strict role-based access control (RBAC). Enforce multi-factor authentication (MFA) for all remote and administrative access. Disable unnecessary services and ports to reduce the attack surface.

Network Segmentation: Isolate Ivanti appliances from sensitive parts of your network. Restrict access to Ivanti devices using firewalls and VPNs, allowing only trusted IP ranges.

Patch Details

Ivanti Connect Secure: Upgrade to version 22.7R2.5 immediately.
Ivanti Policy Secure and Neurons for ZTA Gateways: Patches will be available by January 21, 2025.
