

Data Sheet

Targeted Exposure Reduction For The Modern CISO

The Industry Problem : Vulnerability Management is Broken

For decades, vulnerability management (VM) has been a checkbox exercise, failing to materially elevate security posture. Traditional tools generate overwhelming data—with 40,000+ new CVEs in 2024 alone—but lack the context to answer critical questions:

- "Where am I truly vulnerable?"
- "Are my security controls effective?"
- "Which vulnerabilities are most likely to cause a breach?"

This leads to tool sprawl, alert fatigue, and teams wasting cycles on irrelevant vulnerabilities while critical exposures go unaddressed. You are fixing vulnerabilities, but are you becoming more secure?

Introducing Hive Pro Uni5 Xposure: The First-Class Upgrade for Your VM Program

Hive Pro Uni5 Xposure is the industry’s first true end-to-end Threat Exposure Management (TEM) platform. It transforms your siloed vulnerability data into a unified, actionable strategy for targeted exposure reduction.

Uni5 Xposure connects the dots between vulnerabilities, real-world threats, your unique business context, and security control efficacy to focus your team exclusively on what matters most.

Key Capabilities: From Overwhelmed to In Control

Uni5 Xposure provides a consolidated platform to discover, prioritize, validate, and eliminate your most critical threat exposures.

Uni5 Xposure connects the dots between vulnerabilities, real-world threats, your unique business context, and security control efficacy to focus your team exclusively on what matters most.

Unified Exposure Assessment

Aggregate and normalize vulnerability data from all your existing scanners (Tenable, Qualys, Burp Suite, etc.) and cloud environments into a single source of truth. Gain a 360° view of your risk from code to cloud.

AI-Driven, Real Risk Prioritization

Move beyond generic CVSS scores. Our dynamic Real Risk Score prioritizes vulnerabilities based on:

- Threat Context: Is it exploited in the wild? (CISA KEV, VulnCheck)
- Business Context: How critical is the affected asset?
- Security Context: Are existing controls effective at blocking exploitation?
- Attack Path Analysis: Discover chained vulnerabilities threat actors use in campaigns.

Dynamic Defense Validation

Go beyond theoretical scoring. Test the effectiveness of your security controls against active threat exposure and simulate attacker behavior to validate if an attack is truly feasible in your environment.

Remediation Orchestration & Verification

Close the loop with multi-path guidance (patches, workarounds, IoCs). Orchestrate remediation across your tech stack and verify that fixes are deployed effectively, eliminating manual tracking.

Business Impact: Efficiency, Savings, and Risk Reduction

Hive Pro delivers tangible ROI by enabling your team to accomplish more with less.

Time Efficiency & Focus

Dramatically reduce time spent on triage and prioritization. Focus your team's efforts on the top 1% of vulnerabilities that are likely to be breached, boosting morale and productivity.

Significant Cost Savings

Consolidate multiple point solutions (CAASM, BAS, EASM) into one platform, reducing licensing costs and operational overhead.

Resource Optimization

Achieve faster, better results with your existing team. Maximize the impact per person by automating workflows and providing highly actionable insights.

Transform Your Security Program

Before Hive Pro

⚠️ Siloed Tools

Disconnected data from scanners, CAASM, and BAS tools.

⚠️ Team Overwhelm

Never-Ending influx of vulnerabilities with no context.

⚠️ Limited CISO Impact

Inability to demonstrate security improvement or ROI.

After Hive Pro

✅ A Single Pane of Glass

A unified view of all critical exposures across your entire estate.

✅ A Focused, Empowered Team

Engineers spend time on impactful remediation, not data correlation.

✅ Security Assurance

Continuously validate that your controls work against real threats.

✅ Quantifiable Leadership Impact:

Demonstrate a hardened security posture and clear business value to the board.

Proven Customer Success

"HivePro has improved our vulnerability management by putting threat prioritization and remediation in line and our security posture has improved."

Gartner Peer Insights | Rated ★★★★★

"Nobody does what Hive Pro can do... Legacy scanners complicated the problem; this product simplifies it."

Randy Potts, CISO

Ready to See Your True Exposure?

Stop managing vulnerabilities and start managing risk. Let us show you the top exposures in your environment that are likely to be breached.
